

Project 03: JavaScript & Interactivity

Evaluation Sheet — Programming Logic & Live DOM

Student: _____ Evaluator: _____ Date: _____

Section 1: Variables & Data Types

Variables declared with `let` and `const` (`var` is strictly avoided). Strings, numbers, and booleans are logged to the console using `console.log()`. Values are updated cleanly.

Check: "What error happens in JavaScript if you try to reassign a `const` variable?"

[YES]

[NO]

Section 2: Functions & Conditional Branching

Functions accept parameters and return expected values. Logical conditions use strict equality (`===`) and logical operators (`&&`, `||`). Boundary test cases pass cleanly.

Check: "What is the difference between loose equality (`==`) and strict equality (`===`)?"

[YES]

[NO]

Section 3: DOM Selection & Property Modification

Elements are targeted with `document.getElementById()` and `document.querySelector()`. Text is updated safely with `.textContent` (no dangerous `innerHTML`). Styles and classes are toggled via `.classList`.

Check: "What is the Document Object Model (DOM) in browser memory?"

[YES]

[NO]

Section 4: Events & Dynamic Interactive App

Click events are handled with `addEventListener()` without inline HTML handlers. The interactive counter and task manager dynamically add, cross out, and delete items with state tracking.

Check: "What is a callback function in an event listener?"

[YES]

[NO]

Section 5: Developer Tools & Debugging

Student comfortably opens DevTools (F12), inspects live DOM elements, checks CSS rules in the Styles tab, and reads the Console log for errors during execution.

Check: "How do you use the Console to test a function or inspect a variable live?"

[YES]

[NO]

Summary & Final Result:

All 4 mandatory sections must be YES to PASS.

RESULT:

[] PASS [] FAIL
